

Pacific's Book of Homes

A NOTABLE EXHIBITION OF CALIFORNIA ARCHITECTURE

Announcement

Newest Designs

reserved

for private inspection

Since this Book was published our Architects have created hundreds of *newer* designs, in keeping with modern developments in new day architecture. Our policy of offering each homebuilder an *individually planned* structure prohibits the publication of such plans in book form. All of the newest designs, however, are available for inspection by you in convenient portfolio form in our office or in the office of any Authorized Builder. These special plans comprise the largest and most interesting collection of new and advanced home architecture ever assembled—and even if you do not plan to build immediately a visit to one of these offices will be well worth your while.

A new service feature now offered by us is the assignment of one of our best visualizing Architects to prepare without cost a beautiful perspective rendered in oil crayon of your new home. The drawing will embody exactly your ideas. Upon your approval detailed plans will be drawn and you will see the development of your home step by step. We place at your command the services of an Architect to plan your home.

IMPORTANT

The following changes have been made since this catalog was printed:

All No. 201-5 panel doors have been changed to No. 210-2 panel doors, with No. 303 sash door replacing No. 301. See pages 136 and 137 for door styles.

Where No. 1 trim is specified we furnish 4½ in. plain base and 3½ in. plain casings with fillet, but without cap mould.

Continuous head casing no longer furnished.

Linen closet No. 501 now made without the counter shelf.

Sink cupboards now furnished with toe room or recess.

Drainboards now cut for 20x30 sinks.

Built-in features now furnished with lip doors, patent glass knobs and push button catches.

Full hinged screens are furnished where half sliding are specified.

Pacific Ready-Cut Methods Cut Labor Costs

Here is what we mean by READY-CUT. The INDIVIDUAL pieces of material are cut and prepared at the mill, ready to actually nail in place—for the purpose of eliminating waste of lumber, and to save time and reduce labor costs. Fast, accurate power machines efficiently accomplish a large part of the work ordinarily performed by slow, costly hand labor. The ingenious rafter saw, pictured above, does the work of 20 carpenters. It cuts, bevels, notches and finishes 5000 rafters per day—with absolute accuracy. Scores of other remarkable machines in the Pacific plant contribute to the economical preparation of ready-cut materials.

How you profit

by Our 17 Years of Adherence to an Advanced Principle

—:[By WILLIAM P. BUTTE, President]:—

YOU are the best kind of an American citizen when you own your home! To be a contributing factor in your community and sponsor for your family's cherished realm of happiness you must be a builder. And the greatest of all builders . . . so it has been down through all the Ages . . . is the **Home-builder**. This axiom of Truth has been the foundation of all great countries since time immemorial; it is the economic and spiritual basis of happiness today.

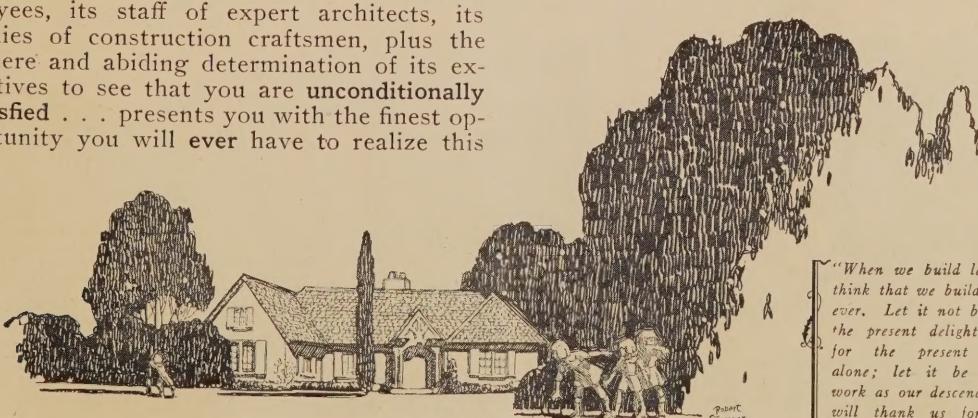

So we assume that every normal man and woman wants a home. And, by that token we take it for granted that **you** want a home. You want that home to provide the best affordable dwelling place for you and your loved ones; you want the greatest amount of home value for the smallest consistent outlay of money and how?

The Pacific Organization . . . with its tremendous financial resources, its 24 acres of manufacturing facilities, its 1,000 skilled employees, its staff of expert architects, its armies of construction craftsmen, plus the sincere and abiding determination of its executives to see that you are **unconditionally satisfied** . . . presents you with the finest opportunity you will ever have to realize this

ambition of yours to get greatest home value. Your investigation will readily prove this.

And we sincerely invite your investigation. Find out for yourself! Find out how this company has grown from a handful of men and a tiny factory 17 years ago to the largest homebuilding organization in America today! From the very inception of this business, we pledged ourselves to make home ownership a reality for every ambitious family who sought our service. We saw the crying need for lower-priced, yet **all-quality** homes and we courageously blazed the trail by eliminating the middlemen and their fat profits and by systematizing every production operation.

Nearly 25,000 Pacific Ready-Cut structures stand today throughout the West as a glowing tribute to our adherence to this advanced Principle . . . Select **your home here**, and assure yourself a lifetime of satisfaction!

"When we build let us think that we build forever. Let it not be for the present delight nor for the present use alone; let it be such work as our descendants will thank us for."

—RUSKIN

Home Ownership *plus* Secure Investment *plus* Highest Value

A Study in Rent Costs

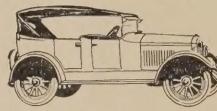

Have you ever realized the high cost of renting? These figures reveal the loss of rent and interest thereon compounded over a period of years.

Rent Paid Per Month	Loss in 10 Years	Loss in 20 Years
\$ 20	\$ 3,163	\$ 8,828
25	3,954	11,035
30	4,745	13,242
40	6,326	17,657
50	7,908	22,071
60	9,499	26,485
70	11,071	30,899
100	15,216	44,142

You Can't Afford Not To Own Your Home

Depreciation vs. Increment

Your Automobile:

Original investment \$1,500
Upkeep and depreciation at \$60.00 per month—in 3 years cost you \$3,660
It is then worth about \$ 350

Your Pacific Home:

Original down payment \$1,500
Monthly payments, interest and taxes, in lieu of rent, at \$60.00 per month including down payment—in 3 years total \$3,660
Your equity is then worth about \$5,500

No Other Investment Pays Bigger Dividends

A Study in Home Values

When you buy a house already built:
Cost of lot, figured at \$1,800
Cost of constructing house by ordinary method 4,000
Profit to speculator who builds the house to sell to you 1,160
Incidental expenses 40
Real Estate man's commission 350
Approximate price you pay \$7,350

When we build you a Pacific Home:
Cost of lot, figured at \$1,800
Actual cost of Pacific Home of similar design, using same or better grades of materials, complete ready for occupancy \$3,750
Total low cost to you \$5,550
Approximate saving \$1,800

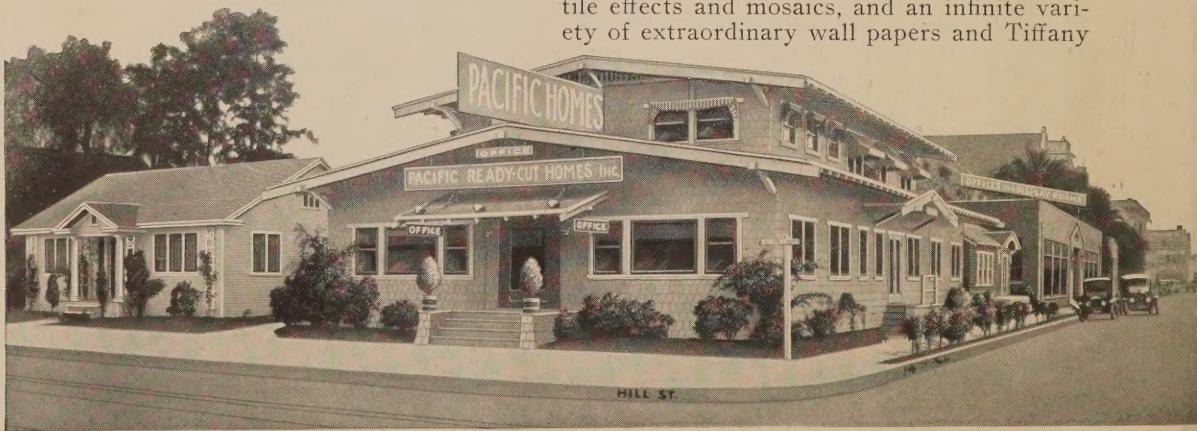

Cheaper to Build Than to Buy Already Built

Come To Our Exhibition Grounds

A Wonderful Presentation of Model Homes for Your Inspection!

Before explaining the Pacific System of construction in detail, we want to tell you about our unique Los Angeles Exhibition Grounds on which we have built and completely furnished a large number of beautiful, economical homes for demonstration service. This intensely interesting "village of homes," covering almost an entire city block, developed at a cost of nearly \$75,000.00, provides for careful-buying home-builders something nowhere else to be found in the United States,—namely a place where every new

and desirable structural, decorative and convenience feature may be seen exactly as it will be in the completed home you choose for your own. On these interesting grounds we keep "open house," where you can get acquainted with the personnel of our organization and come in contact with homebuilding specialists. . . . These homes embody the newest ideas, including the latest conceptions of stucco finish, charming interior wood treatments, built-in features of the most fascinating design, beautiful bathroom tile effects and mosaics, and an infinite variety of extraordinary wall papers and Tiffany

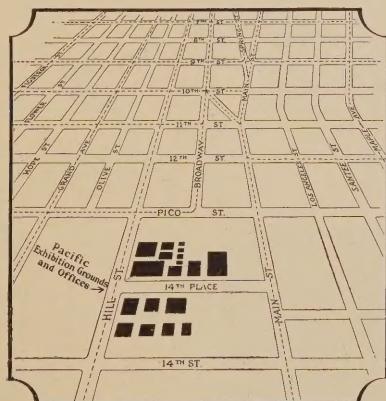

HILL ST.

finishes. These model homes are magnificently equipped with furniture selected to harmonize with the structures distinctive table decorations, rugs, drapes, etc. Approximately 100,000 people visit these Pacific Exhibition Grounds annually. Courteous demonstrators are on the grounds daily to show you through the houses and give you any information you may seek. You are cordially invited to visit these grounds any day, whether you intend to build now or later. Every minute will be well and delightfully spent.

How To Reach Exhibition Grounds

Located at 1330 South Hill Street, Los Angeles. Take South Main Street or Moneta Avenue car to Pico Street, walk two blocks west and one block south; or any car on South Hill Street to Pico Street, walk one block south; or Grand Avenue car or Pico Street car to Pico and Hill streets, walk one block south.

PACIFIC EXECUTIVE COUNCIL REVIEWING NEW DESIGNS
Every plan, before release to the customer, must be approved by the Executive Council, consisting of the heads of each department, who critically review the designs, suggesting betterments if possible—to the end that each plan is as perfect as human ingenuity can make it.

A Wealth of Plans to Meet Your Individual Ideas

Of course it would be well nigh impossible to show all the 1,800 or more plans that we have on file, so we selected for this volume more than 100 representative designs in order to give you an idea of the very complete manner in which Pacific Homes are planned. The designs shown are merely suggestive of what we can offer you. No attempt has been made to catalogue the more elaborate designs, but these are available for inspection at our office.

Architectural Service Without Charge

It is appalling the number of houses costing less than \$4,000 that do not get architectural supervision. To build a small home economically requires more experience, more knowledge, more careful planning than a large one. The

ARCHITECTURAL DEPT.

A CORNER IN PACIFIC'S ARCHITECTURAL DEPARTMENT
Here the plans are designed by experts in California home-planning—one of the largest and most competent corps of architects in America. The services of these architects are available to every purchaser.

bricks and lumber that go into a mis-planned house cost just as much as the material in a perfect home. Hence, there is wisdom in adopting the policy of seeking architectural service. Our architects have collectively put into each plan their accumulated knowledge. When you select a Pacific plan you can rest assured it has received the critical study of many specialists. Our plans are designed to eliminate every inch of waste material and to embody the **luxury of quality** without imposing high price. Our many years of experience in planning, producing and building homes of all sizes qualify us to definitely save you money. Some of the homes shown in this book have been built many times without a single change in the plans because the designs are as near perfect as architectural ingenuity can make them. No charge is made for stock plans.

Individual Plans for Critical Buyers

From our comprehensive collection of plans you can choose one that meets your individual needs, but if you desire a plan drawn to order we will be glad to serve you. A nominal deposit is asked when we draw special plans but this deposit is immediately credited on the purchase price of your new home. No charge whatsoever is made for plans. Our collection of plans includes every type of architecture—Spanish, Colonial, English, Dutch, Norman, California Bungalow styles, and other designs destined to be

the predominating vogue for years to come. Pacific architects are continually presenting new ideas, just as our mill forces are constantly devising improvements to give even higher quality and better service.

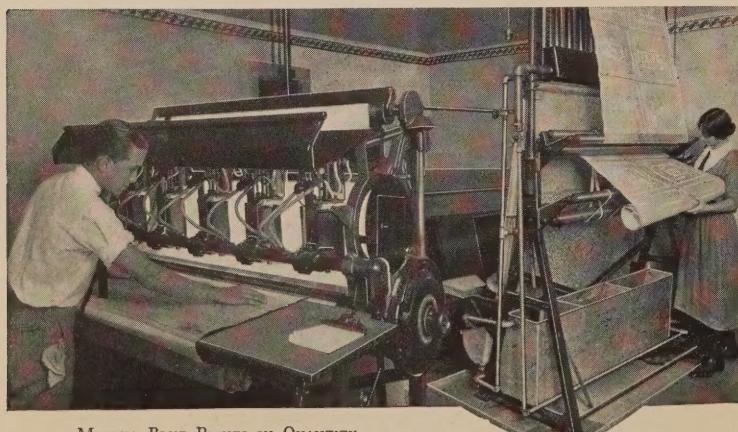

Not Portable—Not Sectional Immovable, permanent construction —for generations of service

A few people are under the impression that ready-cut houses are portable. Pacific Homes are NOT portable—neither are they sectional or fabricated. Just the opposite. They are not built at the mill and cannot be taken down after built. The lumber is delivered in individual pieces like any other load of materials—but the pieces are cut to final length, notched and finished at the mill instead of having the carpenter prepare them on the job by the slow, costly method. If it were cheaper to ship raw lumber to the job we would do it. We ready-cut the materials to save you money.

Saving The House-wife a Mile a Day

Seventy per cent of a housewife's time is spent in and about the kitchen. Nothing speeds up house-work and saves more labor than a well planned kitchen. If you will ask any woman who lives in a Pacific Home why she likes it so much she will tell you that, more than its distinctiveness and substantial construction, she likes its many, many wonderful conveniences. She rejoices in the arrangement of the kitchen cupboards and drawers,

for they are just as she would plan them. This idea of convenience extends to all the other rooms of Pacific Homes

MAKING BLUE PRINTS IN QUANTITY

Because of the large volume of blue prints required for use in constructing thousands of Pacific Homes each year we have a Department devoted entirely to blue print reproduction. A special machine turns out hundreds of blue prints of floor plans, elevations and details per day, at lowest cost.

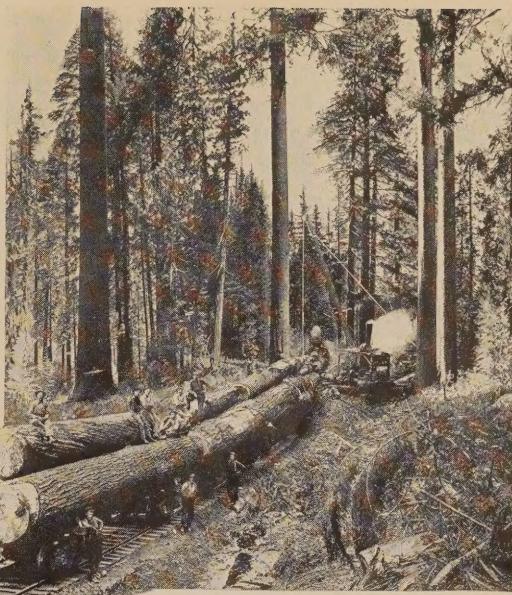

Pacific Materials Have No Equal

When the individual contractor is employed to build a home and purchases his lumber from the local lumber yard he must pay the retail profit and extra handling charges. He must be content with the average run of lumber, which in many cases is not suitable for the quality that the homebuilder is intent upon obtaining for his new home. This means a loss in quality and the payment of in-between profits which the homebuilder must pay. But these "value leaks" are eliminated when the homebuilder entrusts his construction to the Pacific organization. With a purchasing power of more than \$2,000,000 annually we are in a position to command the highest grades of lumber available. Practically all of the lumber selected for Pacific Homes is grown in high altitudes, cut from perfect logs to our order,—uniform grades, scientifically seasoned, constantly inspected and handled with no labor loss. Thus we have a decided advantage over the average lumber yard whose limited local business will not permit of such huge purchases and who cannot make such exacting demands for quality stock.

From Forest To Finished Home —One Organization

Economy in homebuilding must begin at the very source of raw material—at the forest—and continue in an unbroken line to

the ultimate conclusion—the finished home. Multiplied economies are effected by Pacific

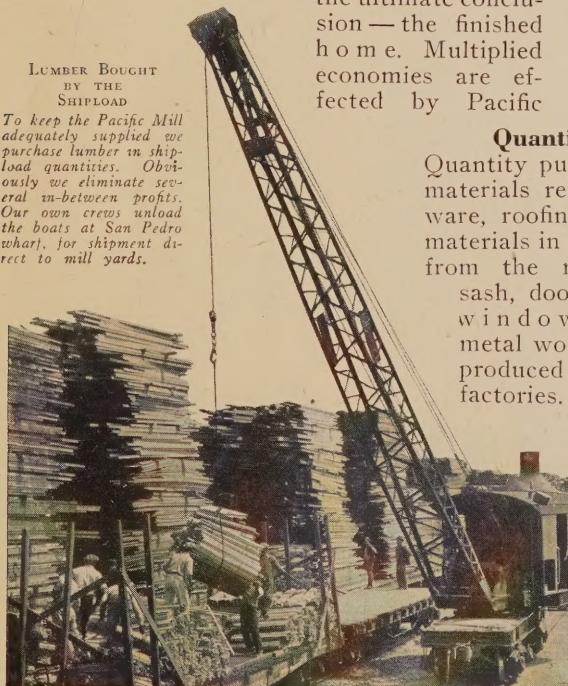

LUMBER FROM HIGH ALTITUDES
Pacific lumber is grown in virgin forests. It is the most select Douglas Fir and is purchased direct from the forest cutters.

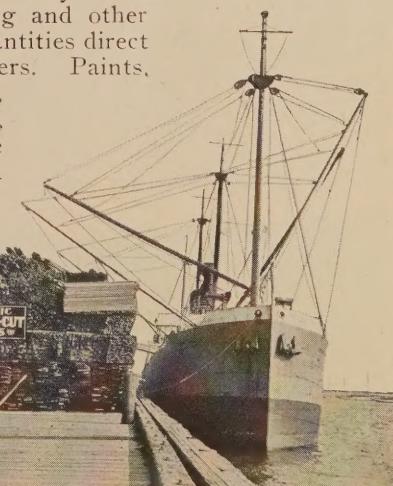

straight-line methods through every step in the selection and production of materials and completion of the home. Knowing the ultimate purpose of every foot of lumber that is selected by our purchasing experts we eliminate many operations in sorting, grading and handling. The saving we obtain by purchasing in shipload quantities and selling direct to the homebuilder eliminates in-between profits. Those in-between profits, when added together, would invariably total several hundred dollars, which you can keep in your pocketbook. We direct a short cut to economy.

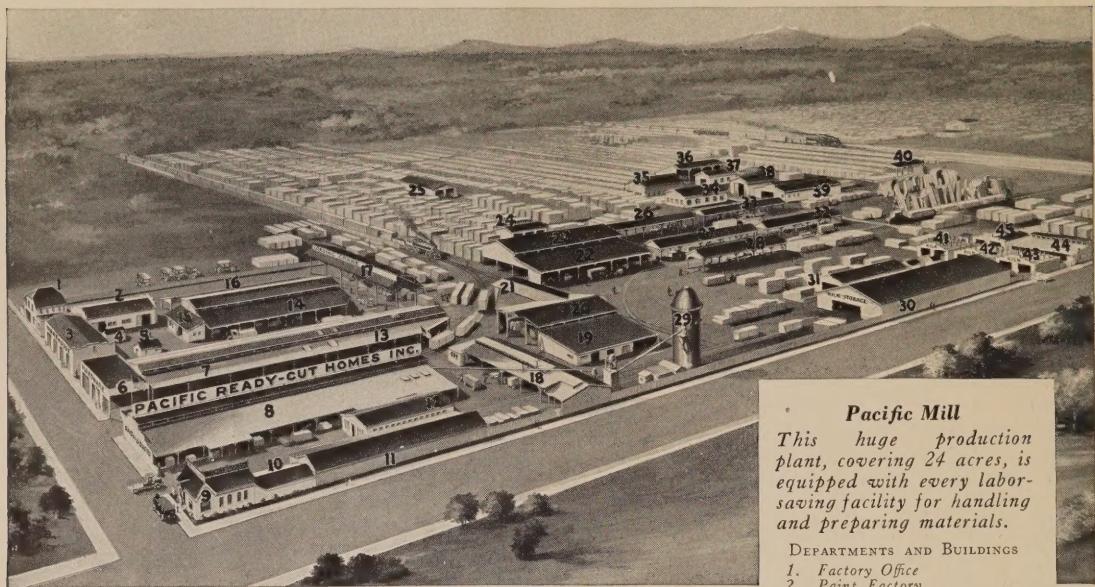

LUMBER BOUGHT BY THE SHIPLOAD

To keep the Pacific Mill adequately supplied we purchase lumber in shipload quantities. Obviously we eliminate several in-between profits. Our own crews unload the boats at San Pedro wharf, for shipment direct to mill yards.

Quantity Buying Power
Quantity purchase extends to other materials required. We buy hardware, roofing, plumbing and other materials in carload quantities direct from the manufacturers. Paints, sash, doors, screens, window shades, metal work, etc., are produced in our own factories.

One Profit Instead of Many

The customer's purchase of the many needed materials is centralized,—so instead of paying a multitude of profits spread over the many and varied items that go into the construction of your home, you pay but **one** profit. The many savings we obtain for you are all applied in building **better quality** into your Pacific Home to sell at a consistent price—an all-value home that can be resold by you at bigger profit than you could realize by building any other type of home.

24 Acres of Service

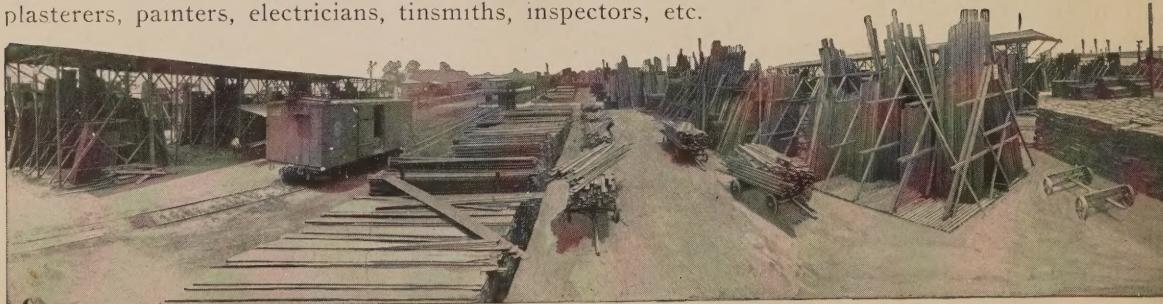

The great Pacific plant is virtually an industrial city within itself—a beehive of activity, capable of producing all the materials for a complete home **every 20 minutes** during the working day. This mammoth plant is equipped with every facility to add quality to Pacific Homes. To reach a capacity of 25 houses daily the functions of every department are systematized so that there is no extra, unprofitable handling of materials. Every operation counts. Materials are prepared in quantity so that when orders are filled there is no delay. Ample stocks of all sizes of individual pieces are carried. Our complete enrollment of employees at the mill and in the construction crews operating direct from the mill numbers approximately 1,000, comprising the most capable cabinet makers, machine operators, carpenters, plumbers, plasterers, painters, electricians, tinsmiths, inspectors, etc.

Pacific Mill

A Vast Assemblage of Pacific Lumber—Acres and Acres of Choicest Materials.

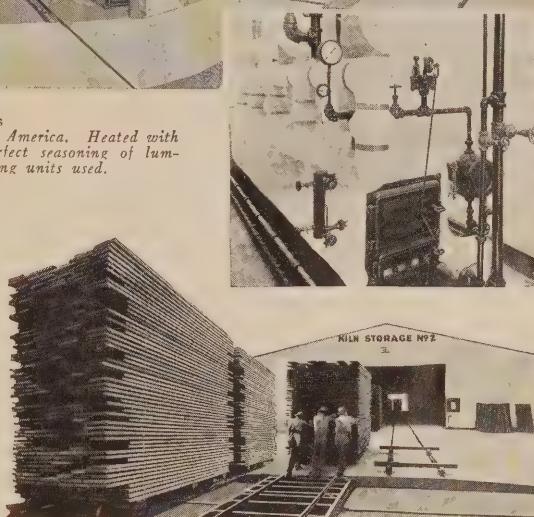

A BATTERY OF PACIFIC DRY KILNS
Pacific dry kilns are fireproof, and are the most modern in America. Heated with circulating dry air under automatic control, insuring perfect seasoning of lumber. The center photograph shows one of the several heating units used.

Careful Inspection

Every foot of Pacific lumber is prime quality for its respective purpose. The lumber, upon arrival at the mill from Los Angeles Harbor, is immediately inspected and carefully piled. Lumber that is to be dry-kilned is loaded from the incoming cars on to our special lumber tram cars, which are transported over Pacific's factory railroad direct into the dry kilns. After scientific kilning the lumber, without reloading, is delivered direct to the various mill cutting departments, where it is fed into the maw of the hungry machines and prepared to final dimensions, ready for shipment—without lost motion.

Elimination of Waste Materials

Waste is unpardonable by this Company's standards. We enforce conservation throughout every department to the end that we can give **more quality** and still retain a low price basis. Special wood working machines elim-

inate the uncertain result of hand labor and insure uniform excellence. Quantity production permits economy not possible otherwise. Every piece of material that can be cut and finished before it reaches the job is so done.

Visit Our Factory

You are cordially invited to visit this great factory any day during working hours. When you place your order you may, if you desire, inspect the materials before they are shipped. The mill is located at Slauson and Boyle Aves

The Largest Lumber Yard in the World Owned and Operated by a Homebuilding Organization.

View of Mill Department Where Lumber is Reduced from Stock Dimensions to Desired Sizes

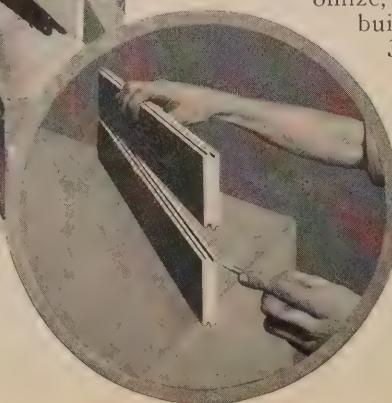

Machine Cut Lumber

It is deliberate waste to permit the carpenter to consume valuable time sawing such pieces as rafters, studding, joists, etc., by hand when the same operations can be accomplished at the mill at a fraction of the cost. For instance: suppose fifty rafters are needed for a home. Now, by the ordinary method the fifty unfinished pieces would be ordered from the local lumber yard and upon arrival at the job would have to be measured, hand-cut, notched and trial fitted—each operation taking time. Then, too, if the rafters have defects the chances are that they would be used anyway because the crew is on the job ready to work.

PERFECT JOINERY

Here is pictured one of the special joinery machines that grooves Pacific interior finish lumber ready for gluing. The edges are cut with dual tongues and grooves, giving double gluing surface, consequently doubly strong splices that will never separate.

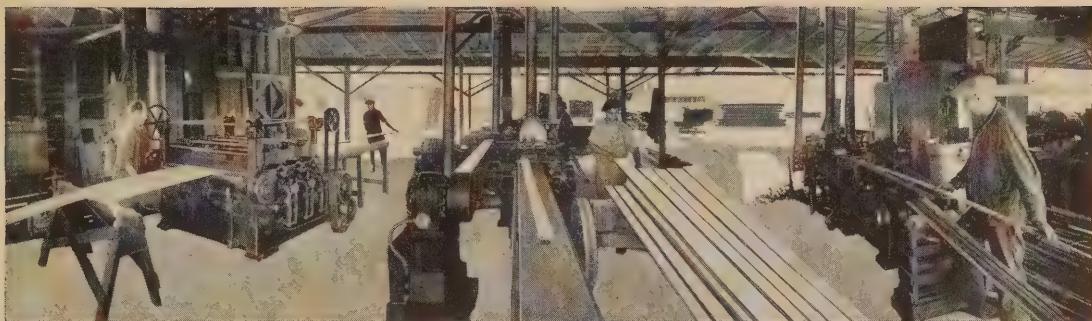

Compare this inefficient method with the way Pacific rafters, studding, etc., are prepared. We prepare thousands of standard rafters at one cutting. These are notched mechanically accurate by machines, therefore of better workmanship, and the cost of finishing such material is a fraction of the cost of the carpenter's time on the job. It is such savings as these that we effect throughout, and as every piece of material must meet Pacific's high quality standard your home will be of sounder construction.

Service Not Available Elsewhere

The average retail lumber yard finds it impracticable to handle the high quality of materials and the large assortment of sizes that we carry in stock, because it cannot sell on a huge quantity scale and hence is unable to furnish the same type of service. The retail yard will handle only the average lengths of lumber and the natural tendency of the carpenter or individual contractor buying from the retail lumber yard is to purchase the longest lengths—the most expensive to produce—and cut them into small pieces. For instance: if he needs a few pieces of 2x4 stock, four feet in length, he usually orders 12 or 16-foot lengths and cuts them into shorts. When we produce shorts we cut them from short pieces and therefore economize, in the interest of the home-builder. Stop to consider that 35% of all studding, sheathing and bracing is from three to ten feet in length and you see the opportunity we have to economize for you. Our prices are convincing testimony of Pacific value.

"It is my firm conviction that within fifteen years 75% of all frame buildings erected in America will be built with ready-cut materials."

—WM. P. BUTTE

Another View of Mill Department, Showing Machines for Planing Stock and Preparing Douglas Fir Flooring.

Giving Infinite Care To Infinite Detail

Reducing homebuilding costs isn't a job for an amateur or individual builder. The only way to cut costs and practice wisest economy is to eliminate waste in every operation and this can only be effectively accomplished by factory methods. The day has past when we must merely conserve lumber. Today we must economize in labor and materials and ordinary lumber requires a great deal more time to handle and prepare than Pacific lumber.

The Pacific system of building homes parallels in many respects progressive factory production methods that have been perfected in the largest automobile plants. Every operation is systematized. Have you ever stopped to realize that all furniture produced in modern factories is ready-cut? And skyscrapers likewise are ready-cut. The big steel beams that you see swinging in the air were produced and finished at the factory, ready to fit in place upon arrival at the job.

Why Scatter Responsibility?

The whole idea of the Pacific system is to centralize your purchases in order that you can

"A great field of service to the building industry itself and to the country as a whole lies in the elimination of those great wastes which are beyond the control of any one individual."

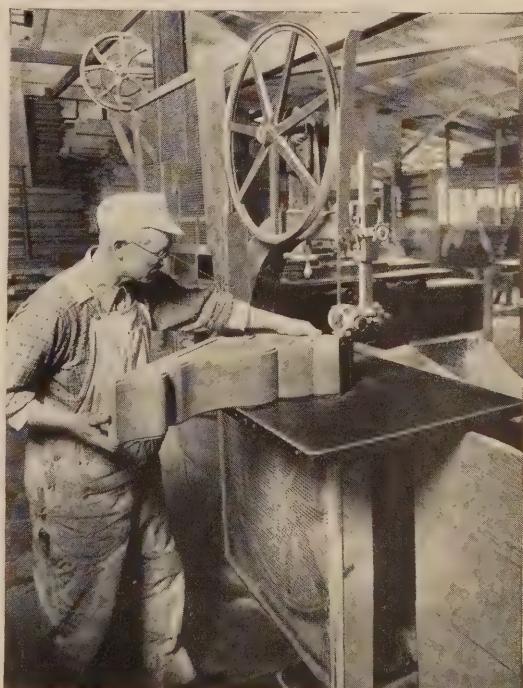

—HERBERT HOOVER

profit by one complete homebuilding service, in which all responsibility rests. Instead of buying your lumber at a local yard, your paints from the paint dealer, your plumbing from your plumber, your plans from the architect and employing your own carpenters you can engage us to assume all the responsibility and we go still further in rendering service by preparing the materials at the mill instead of on the job, giving you the benefit of our huge purchasing power, our

systematized methods of saving—in short you profit by a giant merger of minds, methods and resources, giving your dollars bigger purchasing power and insuring beyond per-adventure the utmost value.

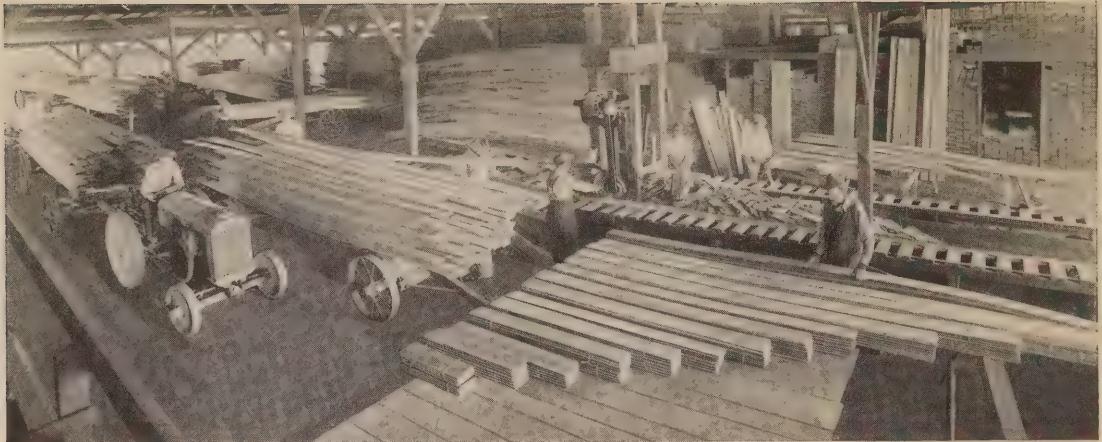

Carpenters Accomplish More

The unprofitable carpenter work—that which costs the most—is performed by power machines in the Pacific mill so that the carpenters on the job can devote their entire time to actually nailing pieces into place and, consequently, we can build your Pacific home in quicker time than required for the ordinary house.

PREPARING ORNAMENTAL BRACKETS

This is the way we handle work requiring intricate sawing. Power band saws are utilized to shape ornamental brackets and other work that is usually done by hand on the job.

DIMENSIONING AND GRADING KNOTLESS SIDING

Pacific siding is cut from extra choice stock and is measured with special gauges. Knots and other defects are eliminated and every foot of siding is perfect stock, guaranteed free from defects. It is neatly bundled into various sizes instead of being shipped in raw miscellaneous lengths.

The Hazard of Price-Cutting Bids

The home-builder who selects a Pacific structure understands that while our price may not be the highest or the lowest—it will always be fair—and it will be by far the greatest value when quality is considered. Pacific will not speculate on price to get an order, or allow the quality of the job to be sacrificed under any circumstances. No other contractor would dare put so much quality into a home and expect to make a profit. He'd go bankrupt. Nor could we offer as much quality—were it not for our ability to do things in a big way. If our only desire was to cut price we could cut the quality in our siding, under-bracing, framing, paints and other materials, but our customers instinctively test Pacific facilities more severely than those of an individual contractor

Any contractor can quote you a "cheap" price, but your home may be priced high in the end. We pledge extra value. Our specifications are the strongest ever written.

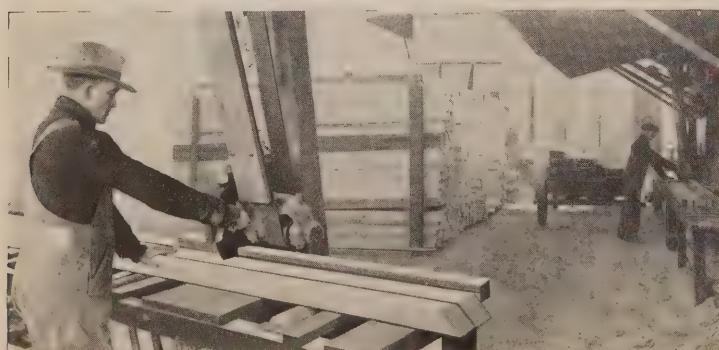

Saving In Time

Individual ready-cut pieces are prepared in large quantities and stocked in the various departments ready for immediate shipment. When you place your order the complete material lists are prepared and sent to the factory where your order is filled and shipped to location. There is no delay or shortage to slow up construction. Your home will be completed ready for occupancy weeks sooner than is ordinarily the case—an advantage of dealing with one organization that handles all details from forest to finished home.

No In-Between Profits

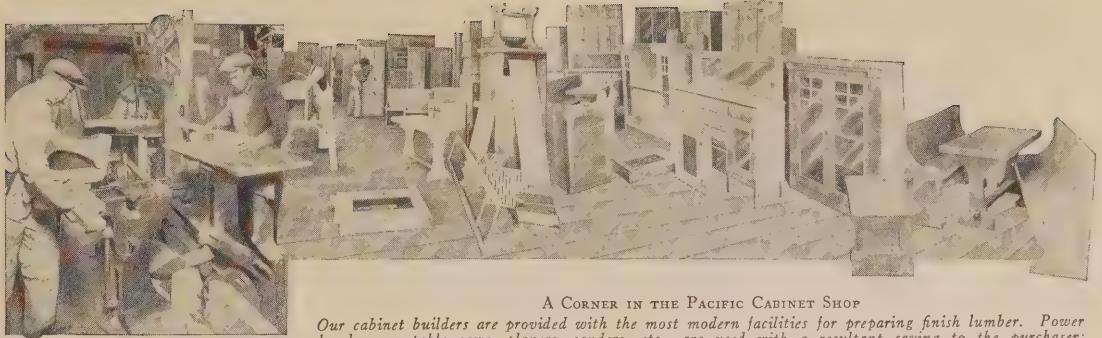

Throughout our manifold operations, buying from forest cutters, manufacturing many of the materials in our own factories such as paints, doors, sash, screens, electrical fixtures and window shades, this company takes but one profit. By dealing direct with the largest home building organization in the world you escape paying middle profits. Our one profit is unusually small but we turn our investment over rapidly; and thus the return on our investment is sufficient

Homes of any size can be constructed by the Pacific System. Whether you want a one-room structure or a palatial mansion, ready-cut materials will reduce the cost and add quality—assuring highest value.

POWER SAWS REPLACE SLOW HAND SAWS

Scores of traveling power saws such as shown in this photograph are operated in Pacific Mill. These saws will do the work of many carpenters at a fraction of the cost.

A CORNER IN THE PACIFIC CABINET SHOP
Our cabinet builders are provided with the most modern facilities for preparing finish lumber. Power band saws, table saws, planers, sanders, etc., are used with a resultant saving to the purchaser.

Building Laws Met

In designing Pacific Homes our architects follow closely the recognized standards of building construction, to conform to the complex ordinances and laws of municipalities and states. The building regulations of practically every city in the Southwest are closely studied and if any point arises necessitating a change in specifications to conform with some peculiar law, we can of course make it.

Liability Insurance For All Workmen

As a protection to the customer and to our employes we carry workmen's compensation insurance, relieving the customer of that expense. Our responsibility saves the customer bonding expense. Dealing with the individual contractor it is necessary, as a protective measure, to require a bond, which, of course, must be paid for by the customer in the end.

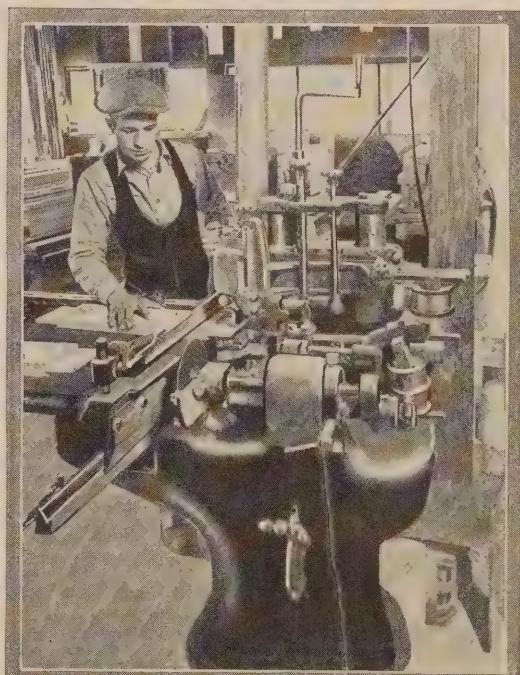

Mail Orders Filled

Pacific Homes are priced the same to everyone. The homebuilder living distant from Los Angeles secures identically the same f. o. b. mill price on materials as

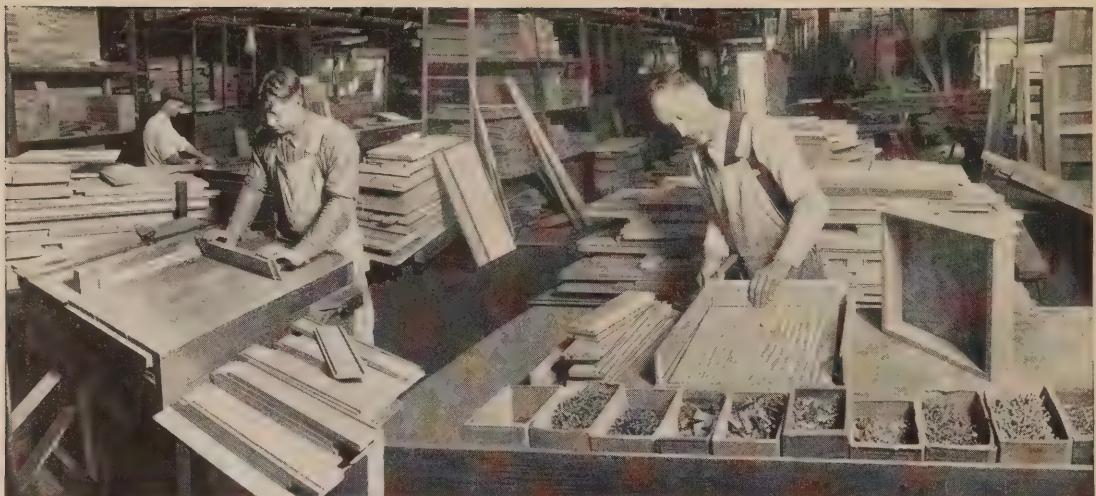

Window frames of unusual design and oddly shaped interior finish stock are prepared by this power shaper, eliminating slow, tedious hand work usually required on the job.

the purchaser who comes to our office and places his order for the materials and has us construct the home. Therefore, we offer the unusual opportunity to homebuilders distant from Los Angeles to enjoy all the wonderful features of California homes. Purchasers save on freight because there are no waste materials. We have shipped materials to many parts of the United States. Our designs are adaptable to all climates. When materials only are furnished we send complete material lists and instructions for erection so that the customer's carpenters can handle the construction as intelligently as our own crews. An order blank accompanies this catalogue for your convenience. Any special information regarding placing of your order will be gladly given upon request.

TENONING DOOR STOCK BY MACHINE
Tenons and mortises, tongues and grooves and other milled work are finished to absolute accuracy by special machinery.

The individual pieces for drawers, etc., are grooved ready to assemble, and shipped in bundles from mill to job.

Orders for Foreign Shipment

We have special facilities for shipping Pacific ready-cut materials to far away destinations. We take great care in packing the lumber and see that the materials meet all shipping regulations. We have shipped materials for homes erected in Alaska, Hawaii, Mexico, Belgium, England and many South American countries.

Railroad Fare Refunded

We are particularly anxious to have every

prospective homebuilder call at our Los Angeles exhibition grounds to personally inspect the sample structures. If you live within 100 miles of Los Angeles we will refund your railroad fare after you place an order amounting to over \$300. If you cannot come to Los Angeles, we'll be glad to give you addresses of Pacific Homes in your immediate locality, for inspection.

Foreman Furnished

If you purchase Pacific materials only and desire the services of one of our expert foremen to superintend and assist in the construction, we can make such arrangements, providing you pay the cost of his wages, mileage, and board. See page 160.

Building Loans Arranged

Our special financing department will assist you in negotiating a loan to erect your home. Pacific prices are estimated on a **cash basis** and our small margin of profit will not permit us to give extended credit. If you own a clear lot in a desirable location and require capital to purchase your Pacific Home we can handle all the details of financing and get the loan for you in quickest time. See page 160. Building and loan companies are eager to finance Pacific Homes because of the dependable security offered. They are familiar with the quality of our homes and know that their investment will be amply protected.

This ingenious mortiser is one of many machines in our sash and door factory. Used for preparing grooves of any depth.

Why let your vacant lot remain idle? Turn it into income property. Build a Pacific Home and the rent will pay back the investment. Our Financing Department will help negotiate the necessary loan.

A corner in our sash department where the entire sash is produced, finished and glazed, ready for shipment.

Range of Prices

We cannot consistently quote in this catalog the prices of Pacific Homes constructed, on account of the many varying conditions, such as contour of lot, distance materials must be hauled, grades of plumbing desired, etc. In the Price List that accompanies this catalog we quote the f. o. b. mill price for the materials only, but upon application we will give you our exact estimate for constructing any house shown—erected on your lot ready for occupancy. We can also give estimates on hundreds of other plans on file at our office, prices of which range from a few hundred dollars to \$10,000. We will also design a home to your special order and give you an exact estimate on the cost of building same.

Miscellaneous Materials

There is no item of building material that we cannot supply. Lumber or other miscellaneous materials can be furnished in lengths or ready-cut for such purposes as fences, board walks, outbuildings, etc. Estimates upon request.

PACIFIC FACTS

Established—17 years ago.

Pacific Assets—over \$2,000,000.

Factory Area—24 acres.

Production Facilities—25 houses per day

Payroll—in excess of \$1,000,000

Purchasing Power—over \$2,000,000.

Structures Produced—24,500.

Plans on file—over 1800.

Pacific doors are produced from selected stock in our own door factory. This plant is equipped with many labor and time saving machines that assure economical production.

PACIFIC PAINT FACTORY

Here is a group of photographs taken in our paint factory where all Pacific paints, enamels, stains and varnishes are produced.

Pacific's Responsibility Is Your Protection

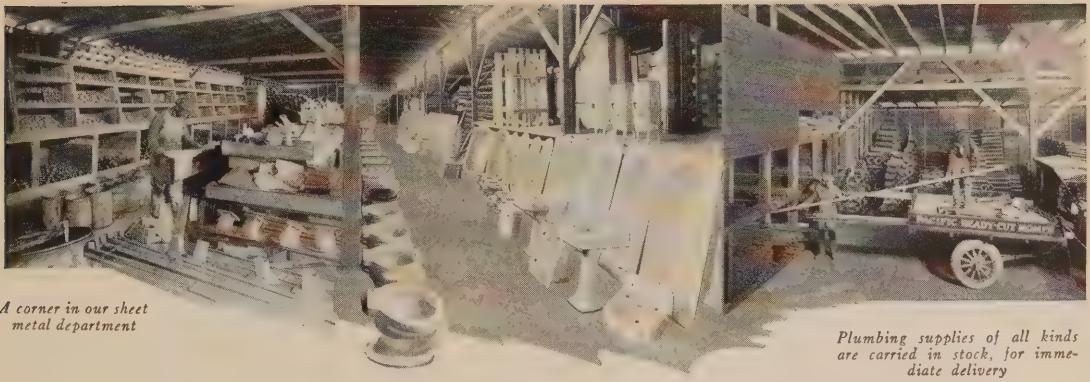

Irrespective of the type or size of home you propose to have built we can give you complete service—plan your home, furnish the finest materials, erect the structure and hand you the key. It is something to know that good homebuilding is more profitable than poor homebuilding, but it is a greater satisfaction to feel that it expresses not alone your ideals but the best efforts of your builder. We obligate ourselves to give you superior homebuilding service before you place your order. In face of our written pledge, our guarantee and our established record of having produced 24,500 structures, the responsibility for selecting the builder of your home rests solely with you—you know whether or not you are willing to entrust your home problems to a builder who offers less assurance of value than this reputable organization. So we offer our service with a firm conviction that you will welcome this opportunity as the most logical way to receive the greatest value for every dollar you invest.

The name "Pacific Homes" is confidently accepted everywhere as even more than quality identification. It stands after seventeen years as a definite contract endorsed by every member of our organization to maintain the highest standard of excellence in plan and detail.

MAKING PACIFIC WINDOW SHADES

Our own window shade factory produces shades of all styles and sizes from quality hand-made cloth.

A corner in our sheet metal department

Plumbing supplies of all kinds are carried in stock, for immediate delivery

We Can Build Your Home Complete

Price for Home Constructed Includes:

—all materials and all carpenter labor, concrete foundation, cement work, plastering, stucco if house is to be that finish, painting, plumbing fixtures and installation, electrical fixtures and installation, interior decorating, building permits, liability insurance, transportation of materials—in fact everything necessary to construct and finish the home, ready for occupancy—a “turn key” job, as per written specifications. We maintain our own crews of carpenters, masons, plumbers, plasterers, electricians, painters, decorators, etc., so that responsibility is centralized in one organization. Thus by entrusting us with your home-building you obtain a home in quickest time, erected on your lot and escape payment of middlemen's profits. There are no extras to pay for, no unforeseen expenses. Further information on our construction service is given on page 19.

F. O. B. Mill Price Includes:

—lumber ready-cut, in ample quantities to finish the home, interior mill work, plenty of nails, roofing, sub-floor and oak flooring where specified, sash, doors, windows, glass, screens, hardware, flashing, insulating felt when specified, paints, stains, enamels, varnish, full working plans, material lists and instructions for erection. Built-in features are shipped in bundles ready to assemble. Pages 20-21 illustrate a typical shipment of materials. The f. o. b. mill prices quoted in the catalog price list do not include carpenter labor, plumbing, electric wiring and fixtures, masonry, interior decorating and plastering. Prices on these items can be obtained at our office. We quote f. o. b. mill prices for the convenience of home builders distant from Los Angeles, who wish to use Pacific ready-cut materials in the construction of their home. See page 160.

*Construction Service
Outside of Los Angeles*

If your home is to be built distant from Los Angeles, outside of the traveling radius of our crews, arrangements can be made with nearest builder of Pacific Homes (name on request) to assume the responsibility.

Modern methods of loading decrease cost of handling in the PACIFIC plant. Complete loads of material are electrically lifted and placed on outgoing trucks in a fraction of the time ordinarily required

Our fleet of more than thirty-five trucks and service cars travel to all parts of the Southland, making prompt delivery of orders and at minimum cost. Carload freight shipments are loaded on private spur within the mill yards

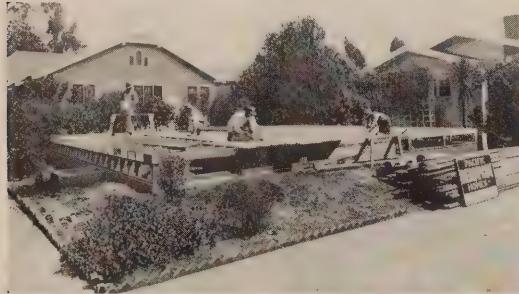

Pacific Homes are Quickly Constructed

Here is interesting photolog of a typical Pacific Home. Erection completed in 28 days.

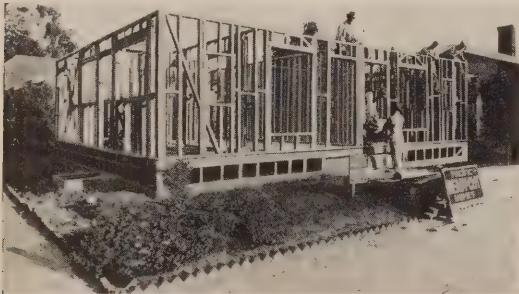

Starting

The cement foundation has been completed and carpenters are removing forms and are ready to begin construction work.

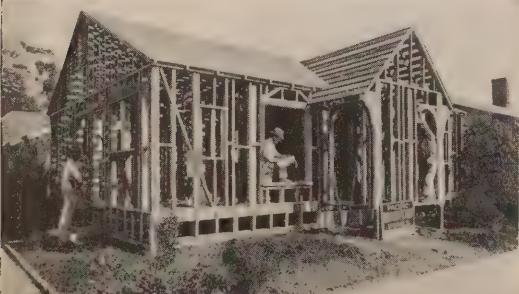

3 1/2 Hours Later

A crew of four carpenters has completed and braced the underpinning, placed the floor joists and is laying sub-floor.

End of the First Day

All walls and partitions are in place, plumbed and braced.

End of the Second Day

By 10:30 A.M. on the second day the ceiling joists and rafters are up. By evening the roof sheathing has been laid and most of the window frames set. The third day, plumbing and wiring are roughed in, valleys and windows flashed.

The Fourth Day

The roof is shingled and exterior lathed, ready for stucco; interior ready for plaster.

The Eighth Day

Plastering has been completed and has thoroughly dried. Exterior has received first two coats ready for color coat. House is ready for cabinet work and other interior finish.

28 Days After Starting

Here is pictured the home complete, ready for occupancy—less than one month's work for average crews working under normal conditions. This is a double house, complete with plumbing, wiring, built-in features, hardwood floors, painting and decorating. It may be inspected on our Los Angeles Exhibition Grounds. The plan is shown on page 66—Style 236.

Complete Construction Service

We will contract to build your home complete, ready for occupancy. In and near Los Angeles our own construction crews operate. Distant from Los Angeles the services of your local distributor and builder of Pacific Homes can be obtained to assume full responsibility—or we can furnish all the materials and the purchaser can arrange with local carpenters and sub-contractors to erect and assume responsibility.

Foundation Work

We put in concrete foundations per specifications. Heavy redwood mudsills and undersills are furnished.

Roughing-in

Pacific carpenter crews are divided into two classes—the "roughing-in" and the "finish" crews. The first crew handles the erection of the house ready for plastering. The second, or "finish" crew, completes the house, ready for final painting.

Roofing

Roofing specialists lay the various types of roofing—shingles, composition, tile, etc.

Lathing and Plastering

The grades of plastering furnished are the finest obtainable and the lathing and plastering work is performed by experts. You are assured of finest workmanship.

Tinning

We operate a tinshop where all down spouts, drains and galvanized work are manufactured. Experienced tinsmiths install these.

Flooring

As per specifications we furnish selected grades of Douglas fir, maple or oak flooring. Hardwood floors are carefully scraped, sandpapered and finished per specifications.

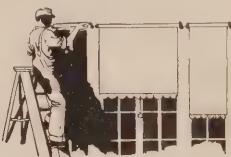

Interior Work

Lumber for interior woodwork is prepared at mill in ready-cut lengths. Our crews of cabinet craftsmen are carefully selected and are required to maintain the highest standards of workmanship. Built-in features are finished with extreme care so that every door and drawer fits accurately.

Linoleum Laying

We can furnish any type of linoleum desired and will have our crew lay same.

Window Shading

If desired we can also furnish shades in any design or color. At the time the order for the home is placed we can quote the complete cost of installing window shades throughout. In our shade factory we manufacture finest hand-made shades, with lace or insertion and in plain designs.

Painting

All paints used in Pacific Homes are manufactured in our own paint mill from specially analyzed materials so that each grade of paint is of proper quality for its particular use and no experimental work is required. Our painters are thoroughly familiar with their materials and can apply them with greater deftness than if they used paints of uncertain quality.

Cement Work

Laying of sidewalks, garage floors and other flat work is a part of our service when we contract to erect the home complete.

Landscaping

If desired we will install shrubbery and ornamental plants, plant lawns and lay out flower gardens.

Plumbing

Work of installing plumbing is synchronized with the construction progress so that no loss of time is involved. We carry complete plumbing fixtures in stock as well as roughing-in materials. Sewer or cesspool work can also be included.

Electrical Work

Prices quoted for complete homes include electrical fixtures, wiring, etc., according to specifications. Any type of fixture can be furnished. Many of these are produced in our own fixture factory.

Inspecting

Every home erected by us is constantly inspected by our Field Superintendents from the time the foundation work is started until the home is completed and we are ready to hand the owner the key. Every item of material is carefully inspected and the workmanship must meet our very high requirements. The customer is relieved of all risk.

100. Mirror Crated for Shipment.

Material is Prepared for Shipment

Treads, risers and carriages cut for front and rear steps as shown. Window and door frames: jambs, headers, sills, interior and exterior casings, head casings, aprons, stools, etc., dadoed, cut to length and bundled, ready to assemble. All sash and windows glazed.

All segment roofs, arched ceilings, brackets, ventilators, Louvres, etc., cut and bundled. Porch posts, flower boxes, balusters, etc., cut.

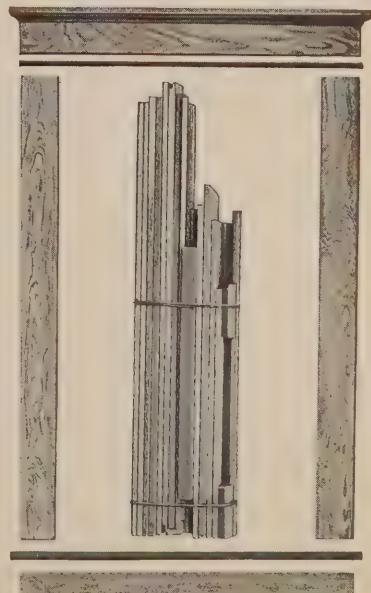

Inside doors squared, mortised for locks and bored for knob and key.

All materials for built-in features cut to length and bundled, ready to assemble. All cupboard doors built up, cupboard sash doors glazed.

Door and window head and side casings, stools, aprons, neck moulds, etc., cut to length. Baseboard picture mould, etc., cut in lengths to permit of accurate fitting.

Nails, hardware, flashing for valleys and outside door and window openings, roofing, paints, stains, etc., complete as per specifications, guaranteed to be ample for completion of building.

All material plainly marked to correspond with plans or material lists.

Window Casings Are Bundled for Shipment

General Specifications

Your attention is called to the very high standard of quality embodied in Pacific Homes as indicated in our written specifications. Regardless of the size or type of house you select we are pledged to give you quality in every item—finer materials than you can obtain elsewhere at the price.

Foundation

We furnish 2" x 6" redwood for mudsills; 2" x 4" underpins and plates for outside walls; 4" x 4" girders and underpins for bearings and allow no girder span to be over 5'. We do not include concrete or brick foundations in our f.o.b. mill prices, but will furnish same under subcontract. If such a foundation is not used we furnish continuous mudsills under each bearing, in which case the underpins and plates are the same as the outside walls.

Framing

All framing material is sound Douglas fir. Sizes of floor joists, studding, ceiling joists, rafters, etc., are standard and the individual specifications indicate the exact dimensions. We pay particular attention to cutting floor joists, studding, cripples, headers, roof bracing, rafters, etc., to give the finished structure maximum solidity and rigidity. This is a feature too often overlooked by the home-builder and where the average contractor is apt to cut specifications.

Roughing-in Lumber

Every foot of Pacific exterior trim lumber is either thoroughly air-seasoned or kiln-dried and carefully selected to serve its purpose. Lumber is inspected before it leaves the mill and must meet our high standard. Dimensions are scientifically figured so that every part of the structure is sound. Siding is of selected quality.

Interior Finish Lumber

Every foot of interior finish lumber, including casings, stock used in built-in features, etc., is clear, selected Douglas fir, kiln-dried, and free from blemishes and defects. In some of the more costly houses mahogany, gum or other material is specified. We carefully grade our finish lumber and see that none leaves the factory with pitch-pockets, knots or other blemishes. Every piece is new and clean, perfectly grained, and by our special process of seasoning and drying is the easiest to work and a delight to the carpenters.

Roofing

When a shingled roof is specified we furnish No. 1*A* cedar shingles, laid 4½ inches to the weather, unless specified otherwise. These shingles are the finest on the market, selected from perfect cedar, free of cracks, knots and warps. Some of the specifications include composition, also granite, crushed brick, jasper or tile.

Ventilators

Screened, lattice or Louvre ventilators are installed in the gables and below the floor line. This permits of good circulation of air in the attic and prevents dry rot under the floors. Ventilators are built up at the mill, ready to nail in place.

Specimen of Staunch Framing Used in Pacific Homes

Insulating Felt

The majority of our frame houses are insulated with sheet felt, a feature seldom found in the average frame structure. This felt is of heavy material, absolutely water-proof. It covers the outside of the studding and over this is nailed the siding. The houses are made absolutely water-proof and the felt keeps the cold out in the winter time and keeps out the torrid heat of summer.

Sash and Windows

All sash are manufactured in our own sash factory, insuring uniform quality throughout. We use sugar pine, carefully seasoned. Window casements are also built at the mill, ready to hang. All casement sash are operated by special adjusters. The sash have mortise and tenon joints, reinforced with steel dowel pins instead of the usual wooden dowel pins and glue. All sash, windows, French doors, etc., are glazed at our factory.

Doors

All French doors and many of the special-made doors are produced in our door factory. Interior doors are 1¾" thick and are mortised for lock and bored for knob and key, saving the carpenter hours of time. Styles of doors are indicated in the individual specifications. See pages 136 and 137 for styles.

Screens

We operate our own screen factory, furnishing well-built screens for all doors and windows, per specifications. These are hinged or sliding, according to the type of house and are 14-mesh galvanized. Copper screen can be furnished at additional cost.

Flooring

When hardwood floors are specified we furnish a sub-floor of 1" fir boards, covered with 36" x 1½" selected oak flooring. This is high grade oak and every foot of it is inspected at our mill before shipment. It is tongued and grooved, and when laid will not warp. Vertical grain fir flooring is specified in the cheaper houses.

Built-in Features

Materials used in cabinet work are carefully prepared at our mill before shipment, smoothly sandpapered, ready to nail in place, with few exceptions. For convenience in shipping the pieces for built-in features are neatly bundled just like knocked-down furniture. Drawer pieces are grooved and notched. Of course, all necessary hardware, glass, etc., is furnished. Illustrations of built-in features are shown on pages 140 to 155.

Paints, Stains, Enamels

Maintaining our own paint factory, we are in a position to produce a finer quality of wood covering material and uniform quality that can be relied upon. All paints, enamels, shellacs, varnishes, etc., are ground and mixed from raw materials to our special formulae. Our exterior house paints have a lead, zinc and oil base which we have found to be the most durable for Western climate. It will not burn, flake, chip or disintegrate and retains its freshness for many years. We furnish the finest grade of enamel in white or tint and best opaque under-coater. The enamel contains only the purest ingredients, is easy to brush on, flows to a perfectly smooth surface, will not sag and will retain its original beauty years longer than cheap enamel. In some of the less costly houses stain or shellac and varnish are specified. Paint is furnished for porches, window casements, etc. In the item of paint and enamel no homebuilder can afford to use cheap materials. In the prices of Pacific houses we have figured the best wood covering that can be furnished.

Hardware

All hardware is furnished, which includes nails of various sizes in ample quantity to meet all requirements, window fittings, drawer pulls, cup-

General Specifications—Continued

board turns, door locks, hinges, escutcheons, door holders, door stops, etc. For the larger homes we furnish solid brass hardware, to be either nickel or brass finish. Glass knobs for doors and built-in features are specified in many of the better types and can be supplied in the cheaper structures if desired. Mortised locks are furnished for all doors unless cylinder front door lock is specified. Special cement coated nails are used for the siding. These nails hold much better than the ordinary kind and will not rust.

Lath, Plaster and Stucco

When we handle the construction, we furnish all labor and necessary materials for both interior and exterior plaster work. When orders are shipped outside of Los Angeles and we furnish only the materials we will be pleased to quote on large plaster and stucco materials as we carry large stocks on hand and shipment can be made at the time the other materials are sent. If the homebuilder handles his own construction work we will state the number of yards of plaster and he can obtain an estimate from the local plaster contractor.

Plasterboard

Some homebuilders prefer plasterboard. We can quote on this type of finish if desired. We have made a careful study of plasterboard produced by the various manufacturers and have selected the type that is best adapted to Western climate. It cannot loosen from dampness, nor will it split, tear, crack, expand, buckle or warp. It is sanitary and fire resisting. We can furnish a special paste filler which when mixed with water can be used to fill the crevices where the board joins. Tint in any desired color is furnished when plasterboard is specified.

Tinting and Decorating

We maintain an interior decorating department to give advice and suggest the most harmonious interior finish. When we erect a home we will be glad to quote our charge for tinting or papering the house, applying Tiffany finish, special mural decorations or any finish desired.

Painting

All f. o. b. mill prices include all paints and enamels, but not painting labor. When we build the home we, of course, include painting labor and can give you any paint finish desired. Our crews of interior painters are particularly adept in the production of beautiful duo-tone finishes, which are so becoming in new-day homes.

Cement Work, Chimneys and Tiling

This work can be furnished when we erect the home, but is not included in the \$1,000. mill price. When we contract to lay sidewalks, concrete foundations, etc., we agree to handle it in the most workmanlike manner and use the most dependable materials. We believe our basis of figuring is the lowest prevailing on the Pacific Coast, due to our large volume of business and efficient crews. Brick work, ornamental tiling, staff work, etc., will be installed by us at lowest cost.

Grill Work

Many of our specifications include ornamental grill work, iron railings, etc. Special grill work can be had at nominal cost.

Electrical Work and Fixtures

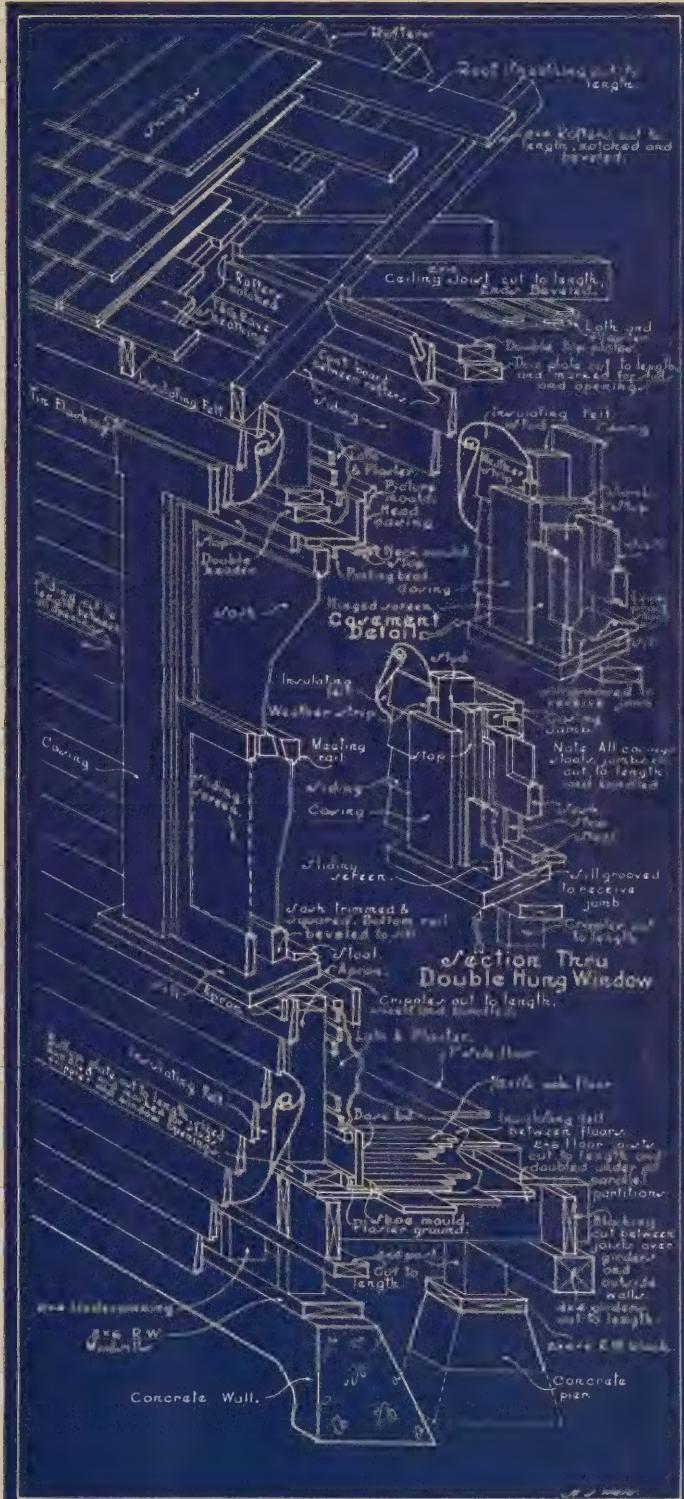

We operate our own fixture factory and maintain dependable crews of electricians to install wiring and fixtures. Each mill price listed in this catalog do not include fixtures, but these will be furnished at nominal cost. When we construct the home we make a fixture allowance so that the purchaser can select his own fixtures within a price range, if desired.

Plumbing and Heating—page 155

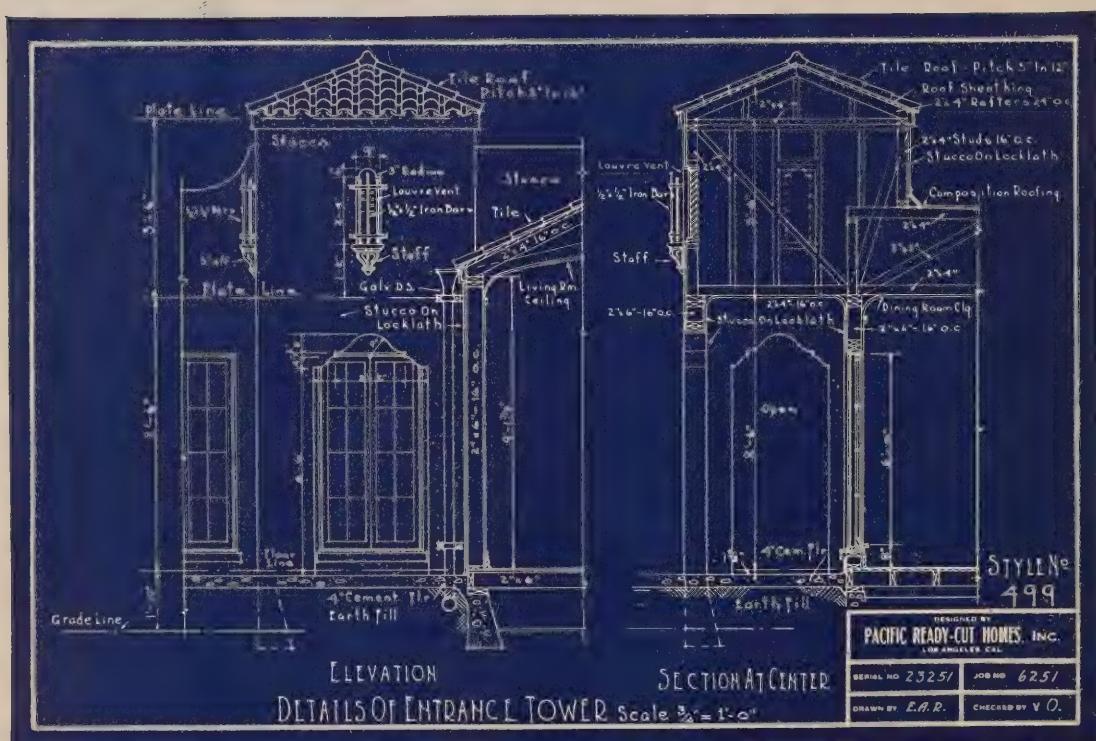

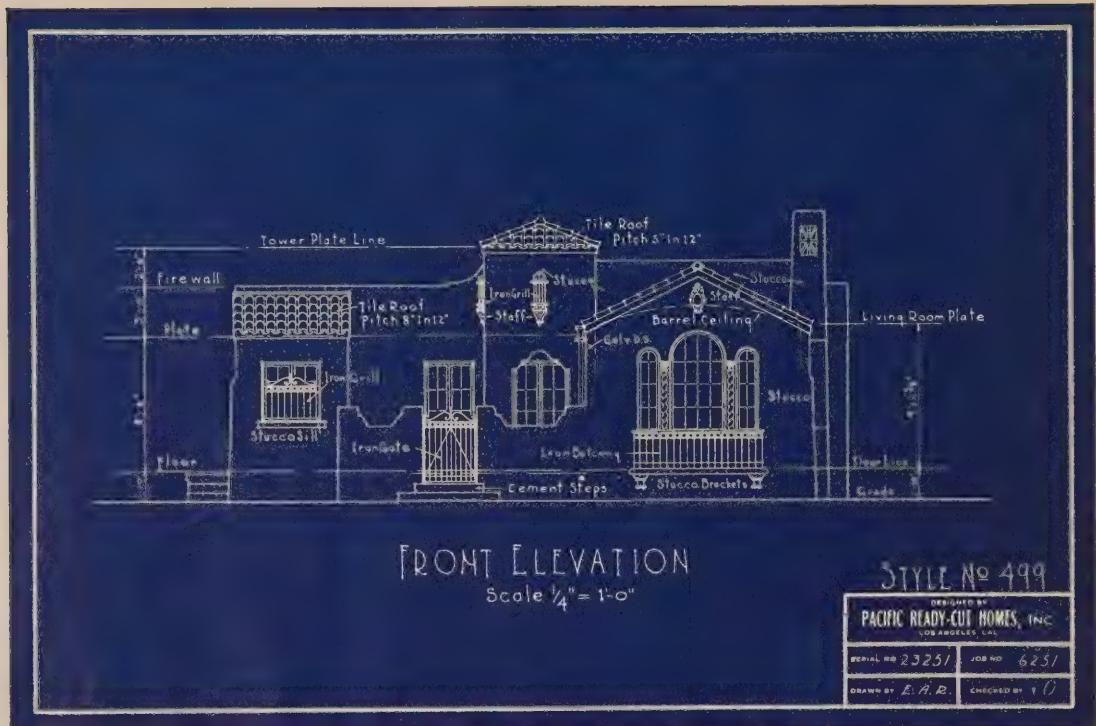

Changes in Specifications

Any specification can be changed to meet the requirements of the purchaser or building ordinances in any locality where we erect the home. If the changes involve an increase or decrease in the price of the home these will be figured at the most consistent cost.

We reserve the right to quote prices to conform with any minor changes in design or specifications that we may make from time to time.

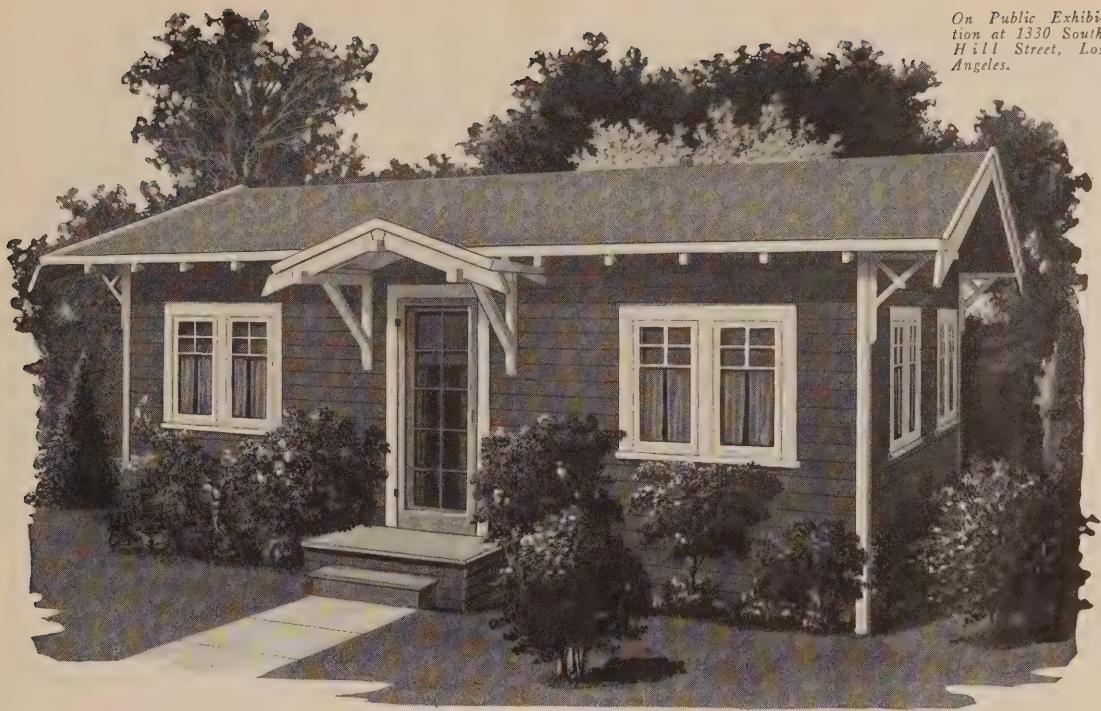

Typical Detail of Wall Construction

Specimen Detail Plans

Miniature Reproductions of Typical Elevations (Style 499 Shown on Page 128)
An individual set of complete plans is furnished with each order

On Public Exhibition at 1330 South Hill Street, Los Angeles.

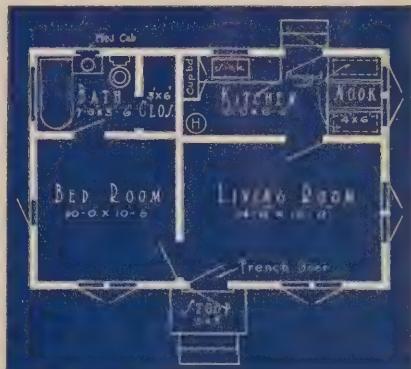

Style 33 ~ Pacific Ready-Cut Home Specifications

A Saving of \$2000.00

San Anselmo, Calif.,
August 5, 1924.

Pacific Ready-Cut Homes, Inc.,
Los Angeles, Calif.

Gentlemen:

On June 14th last, I ordered from you ready-cut home's style, 486. Everyone who has seen the house has marveled at the rapidity with which we have put it up with the small crew of men working, and at the excellence of the materials furnished.

As to economy in construction, I feel safe in stating that we have saved nearly 40% over the price of construction of a similar home by the contractors here. My home labor, plumbing, plastering, chimney and lighting, will run me in the neighborhood of \$4000, possibly some less, and the least a local contractor will figure a home is \$1000 a room.

Of course I have done considerable of the work myself at odd hours, but even if I had not, the saving would have been at least \$2000. To say that we are pleased, is very mildly putting it.

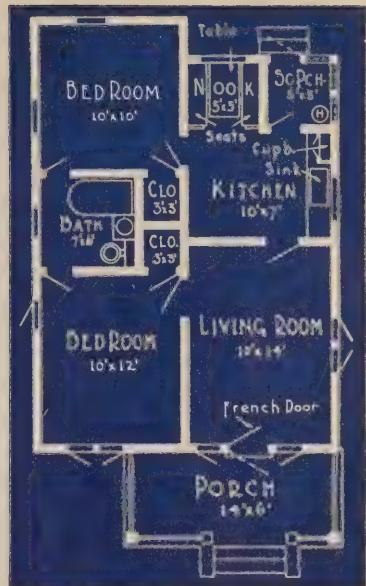

Very truly yours,

(Signed) L. E. GREEN,
P. O. Box 356.

Style 41—Pacific Ready-Cut Home—Specifications

Foundation—Floor 1'-10" above ground. Courts

Designing of courts calls for judicious planning of every foot of space so that the arrangement of the different units will take full advantage of the limited space involved. On these two pages are pictured several court layouts—actual photographs of structures recently erected by the Pacific Organization. These are merely shown as suggestions. We shall be pleased to design special court layouts to meet the requirements of our customers. We have on file hundreds of court plots and plans available for your inspection. The cost of erecting courts depends, of course, upon the type of structures involved. Complete data relative to the cost of erection is available at our office.

Panorama of one of the finest home tracts in Los Angeles—Pacific's Wilshire-Beverly Hills Tract.

Another interesting view of Pacific's Wilshire-Beverly Hills Tract. This magn

Group of Superintendents' cottages erected by Pacific Ready-Cut Homes, Inc., for a well known California Oil Corporation.

Style 198—Pacific 2-story stucco. Specifications upon request.

Special Attention to Industrial Housing.

Industrial housing problems have been given careful study by the Pacific Organization. We have constructed homes singly and in groups for many of the largest oil, mining and industrial corporations—not only in California, but in distant localities. Special information is available on this subject.

Partial view of a large tract of ready-cut homes erected by Pacific Ready-Cut Homes.

...ly Hills Tract, on Carson Road, extending from Wilshire Boulevard, north.

Subdivision comprises fifty-one lots and every home is a Pacific structure.

**Entire Tracts
Have Been Developed
with Pacific Homes.**

On these pages are shown several panoramas of beautiful tracts where Pacific Homes have been erected exclusively. A visit to these tracts will convince the reader of the beauty and quality of the homes erected by this Organization. In scores of localities in California entire blocks are occupied by Pacific Homes. Locations will be given upon request.

Style 199—Pacific 2-story stucco. Specifications upon request.

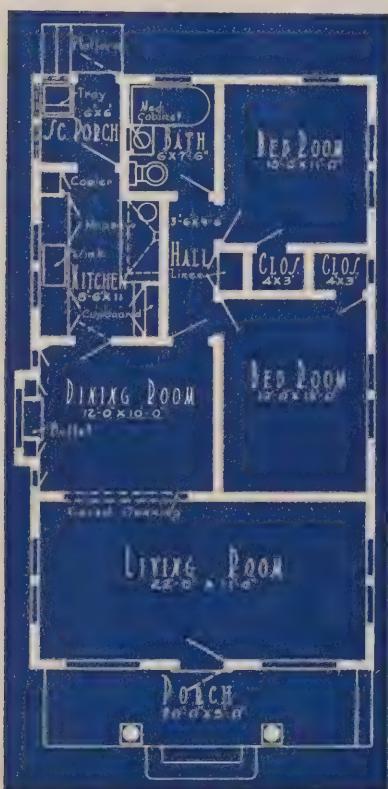

Four Pacific Homes constructed for another large oil corporation near Los Angeles.

, on 81st Street, Los Angeles. This big tract extends from Main Street to Figueroa.

Miscellaneous Structures

Our facilities for producing structures in quantity enable us to quote lowest prices on buildings of all kinds. We have not attempted to catalog miscellaneous types of buildings such as industrial structures, mess houses, bunk houses, barns, stores, etc. We have a large number of plans of miscellaneous structures on file, available for inspection by those interested.

Our architectural department is at your service for the creation of plans of buildings of any description. Serving, as we do, many of the largest corporations in America we are in a position to solve your housing problems with greater efficiency than is possible by any other organization on the Coast.

Interiors

Good taste in home design really begins with the plan, but the convenience and attractiveness of the home can be enhanced by the decorative touches and embodiment of distinctive features, which, though inexpensive, add to the value of the completed structure. Pacific Organization maintains a special Decorating Department, directed by expert Designers whose duty is to create the most distinctive and harmonious effects in interior finish.

Experience gained in the construction and completion of thousands of homes enables this Organization to give service of the most advanced character. We carry on display a huge array of samples of distinctive wall papers, paints and wood finishes, decorative and glazed tiles, linoleum, hardware, fixtures and other items. We can offer the purchaser any style of interior finish, or, if the customer prefers, he may instruct our Decorating Department to use its own judgment in the finish of the home and can rest assured that the result will be most satisfactory.

Built-In Features

—Contribute Convenience And Add Value To Pacific Homes

In your study of Pacific plans you have observed many built-in features. We have provided these where practicable, as they add architectural charm as well as utility. They are actually less expensive than the average portable fixture. In some of the plans we offer a greater variety of built-in features than in others, but the purchaser may, at his option, have any feature added to the plan selected, at extra cost.

We have not attempted to illustrate on the following pages our complete line of built-in features, for many are specially designed for the particular home in which they are to be placed. These illustrations, however, will give you an idea of the attractiveness and convenience of this permanent furniture. The buffets, mantels, bookcases, kitchen cupboards and breakfast furniture are designed to harmonize with the character of the room in which each is placed and to fit the space allowed in the plan.

All of this cabinet work is produced from the finest clear lumber, scientifically kiln-dried and free of pitch-pockets, rosin-runs and other defects that are frequently found in the ordinary run of lumber.

Finest Workmanship

We wish to emphasize the high quality of workmanship and perfection of design. Instead of cutting each piece of finish lumber on the job, the work of preparing, shaping and grooving such parts as drawers, runners, cupboard doors, etc., is done at the mill by accurate machinery. Dado machines groove the drawer parts with absolute accuracy, which is far superior to the ordinary method of preparing by hand. All of the material is smoothly sanded and carefully inspected before leaving the mill and the ready-cut pieces are individually finished and shipped in bundles similar to knocked-down furniture, ready to nail in place. The interior finish crews can therefore immediately begin actual nailing of pieces into place and practically no time is lost in cutting and trial fitting. The result is that each built-in feature is substantially constructed and in absolute plumb. There are no ill-fitting pieces or flaws to mar the finished appearance, no sticky or obstinate drawers. These fixtures are as carefully finished as any fine piece of cabinet work.

Finest Douglas Fir is used unless special materials are ordered, such as mahogany, gum or oak. Wooden drain boards are of selected sugar pine except when tile or composition is specified. All necessary hardware, glass and paints are furnished. The individual specifications of the plans refer to these fixtures by number and we have illustrated the latter in the natural wood finish, in most instances before stain or paint has been applied.

Any style of interior finish can be provided in Pacific Homes

Built-In Features Save Furniture Investment

The purchaser should bear in mind that well designed built-in features add value to the home and for resale purposes are a very strong talking point. Because we can economically furnish these built-in features we are

able to effect a saving over the cost of furniture which the homebuilder might otherwise have to purchase for the same service. Information regarding special designs of built-in features will be given upon request.

Harmonious Wood Finishes

The built-in features shown on these pages are actual photographs taken before paints or stains have been applied. These built-in features are finished to conform with the treatment of the balance of the woodwork in the room.

Hardware furnished is selected to harmonize with the general style of the built-in feature on which it is to be installed and with the finish of the woodwork in the room.

Built-in Features Vary In Dimensions

The built-in features shown in this catalog are representative of the cabinet work furnished. These are types only and are constructed in dimensions to fit their allotted space. For instance: cupboard No. 204 illustrated below may be specified to fit a six-foot recess in the kitchen. Certain dimensions may necessitate an addition of two extra doors and drawer in order to adequately fill the space. All built-in features are designed in dimensions to fit the space provided on the plan.

Kitchen Conveniences

How many miles a day does the mistress of your home walk in her kitchen? Every step that can be saved helps relieve the burden of kitchen work. Pacific kitchens have been designed by women—those who fully appreciate the value of well arranged built-in features. On this page are shown four types of Pacific kitchens that reveal the very practicable placement of cupboards and drawers. There are no awkward corners. Sinks are built to the proper height and in correct position; every cupboard is easily accessible. Pacific kitchens are usually finished in flat white, covered with the finest glazed enamel, per specifications.

Gray or ivory enamel can be substituted for white enamel in kitchens, baths, halls, etc., where enamel finish is specified.

Chest of Drawers No. 1401

Recess Bed No. 802

Oscillating Door Bed
No. 804

Closet Bed No. 801

Disappearing Beds

Extra large closets and special recesses are constructed in some of the Pacific plans for the accommodation of disappearing beds. Beds are furnished when indicated in the specifications, or can be supplied at reasonable cost on special order. We carry several different designs of beds, three types of which are illustrated on this page. Closet bed No. 801 is equipped with rubber casters and fitted with bumpers to prevent marring of the woodwork.

Plumbing

Our plumbing department is one of the largest on the Pacific Coast. All types and grades of plumbing fixtures are carried in stock, ready for immediate shipment and installation. We employ large crews of expert plumbers to give complete installation service. Our cost basis is, we believe, the lowest on the Pacific Coast, made possible by our purchasing power and large volume of business.

The list price of ready-cut materials does not include plumbing fixtures or installation, but when we erect the home we include this service per specifications. Upon request we will quote prices on individual fixtures and items such as pipe, drains, fittings and other roughing-in material. Plumbing should be purchased at the time the materials are ordered, if you intend to handle your own construction work, as we can

then make shipment of all material at the same time. When the customer's local plumber is to install roughing-in materials and make connections we will furnish plans from which he can accurately figure an estimate.

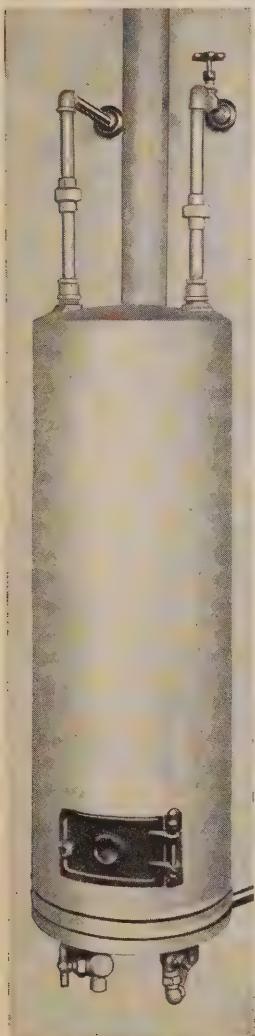

Or this page are shown three types of extremely satisfactory water heaters. May be had with legs or brackets. The Combination Boiler and Heater is very compact, the burner being set within the shell of the boiler directly under the water. The Automatic Water Heater requires no boiler as it instantly heats the water when a hot water faucet is turned on. The gas shuts off when the faucet is closed. The Automatic Storage Heater keeps its boiler of water hot continually.

Heating Equipment

Cost of installing floor furnaces, wall furnaces, unit-type cellar furnaces, steam or gas radiators, including vents, quoted on request.

MOTLEY H. FLINT
EXECUTIVE VICE-PRESIDENT

September 12th, 1924

Pacific Ready-Cut Homes, Inc.,
1330 South Hill Street,
Los Angeles, California.

Attention: Wm. P. Butte, President & General Manager

Gentlemen:

During the past sixteen years of our close business relationship, I have watched with interest the growth of your company from a very small beginning to a corporation with assets in excess of \$1,000,000.00. I take this opportunity of extending you my congratulations upon your most remarkable progress during that period of time.

A careful analysis of your last financial report shows me two important points; that your business has increased very largely during the past year, also that an able and aggressive management has provided for a future increase of even greater proportions. Your excellent service to thousands of pleased customers is a reflection of the wonderful increase of business you have enjoyed each year over that of the previous year.

It is indeed a pleasure to testify to your high financial standing, also the honesty and integrity of your executives and to your uniformly fair business policy.

It is gratifying to have business dealings with your company since you have met every obligation promptly and everyone with whom I have come in contact has been entirely satisfied with the treatment accorded them.

Assuring you of my best wishes for your continued prosperity,
I remain

Very truly yours,

Executive Vice President.

The Owners of 24,500 Pacific Ready-Cut Structures

"Seventeen Years of Homebuilding Responsibility"

Pacific Guarantee

Materials as Represented:

WE GUARANTEE that the materials shipped to our customers will be exactly as represented in this Catalog.

No Shortage:

WE GUARANTEE to furnish with every order ample material to complete the structure according to plans and specifications.

Safe Arrival:

WE GUARANTEE all materials to arrive at destination in good condition and to replace any materials damaged in transit.

Quality:

WE GUARANTEE that the respective grades of lumber and other materials furnished for use in Pacific structures will be superior to the average grade of materials used in structures of the same general type. We further guarantee that the lumber will be suitable for its respective use and to meet specifications in every respect.

Labor Saving:

WE GUARANTEE that when our written instructions are followed, under the supervision of a competent foreman, the Pacific Ready-Cut System will result in a saving of from 15% to 25% on the carpenter labor.

Plans and Specifications:

WE GUARANTEE to furnish plans, specifications and full instructions which are accurate in every detail and if followed no mistakes will occur.

Prompt Shipment:

WE GUARANTEE prompt shipment at all times and agree to ship via the most appropriate route.

Construction Service:

WE GUARANTEE to render complete construction service when we are employed to handle the erection work.

WE GUARANTEE to build the home on the purchaser's lot, ready for occupancy, when the accepted order calls for a "turn key" job, and this service includes furnishing of all materials, carpenter labor, painting labor, cement work, plastering, plumbing work and fixtures, electrical work and fixtures, interior decorating, etc., according to specifications and in a workmanlike manner.

WE GUARANTEE to cover all our workmen with compensation insurance, relieving the purchaser of liability.

Behind Our Guarantee:

THIS GUARANTEE is further supported by seventeen years of responsible home-building service and by the strong financial resources of the largest home-building Organization in America. Added to the moral integrity of our Organization is our unbroken record of satisfactory service rendered to purchasers of approximately 24,500 Pacific structures.

TERMS

All list prices for materials are f.o.b. (free on board cars) our factory, Los Angeles, in carload shipment. On less than carload rail shipment a nominal charge is made for delivery from our factory to the local freight station. We will gladly quote f.o.b. destination on rail shipments, the freight prepaid, if requested.

We maintain a large fleet of motor trucks and will quote prices delivered via truck to locations near Los Angeles, and also to Los Angeles Harbor on orders for foreign shipment.

Terms

When Materials Only Are Furnished:

When Shipped via Railroad: One-fourth of the purchase price to be paid with order, plus freight, if freight is to be prepaid by us; balance on receipt of sight draft with bill of lading attached, (C. O. D.).

When Shipped via Truck: One-fourth of the purchase price to be paid with order, plus cartage if delivered by the Company's trucks; one-half of the balance when the rough material is delivered; balance on delivery of the finish material. If material is hauled by the purchaser's truck, payment shall be made when truck receives the material at our mill.

Terms

When We Build the House Complete:

We are prepared to quote completed prices, to include furnishing of all materials, transportation, carpenter labor, plastering, plumbing, cement work, electrical work, painting, etc.—see Page 17.

The terms covering homes erected by us ready for occupancy are: 25% of the completed price with order, 25% when the building is under roof, 25% when plastered, and final payment upon completion of the building.

2% Cash Discount

A discount of 2% on Ready-Cut Materials is allowed for all cash with order.

Building Loans Arranged.

Whether we merely furnish the material or handle the complete construction of any Pacific Ready-Cut Home, our Financial Department is prepared to assist home-builders in negotiating loans. If you own a lot in a desirable location and require additional capital to purchase and erect a home, get in touch with us. We can either arrange the loan for you or give you definite information regarding the most convenient methods to follow in quickly securing the necessary loan. Our financial advisory service places you under no obligation.

5-Day Inspection Offer.

If you are merely purchasing the materials from us and prefer to inspect your material before paying for same, you may do so by depositing the full purchase price with any bank, trust company or building and loan association. Attached to the back inside cover of the catalog is a form to be filled in and signed by the proper officer of the institution. Upon receipt of this Certificate of Deposit, we will be glad to make ship-

ment to your order and you will be allowed five days on receipt of the shipment in which to examine the materials and satisfy yourself that they are as represented. Write for further information if you wish to take advantage of this offer.

Foreman Furnished If Desired.

If the purchaser prefers, we will furnish an expert working foreman to superintend and assist in the construction—his wages and cost of his carfare or mileage, board and room to be paid to Pacific Ready-Cut Homes, Inc., weekly. If you are interested in having us furnish such a man, write for further details as to rate of wages, etc.

Prices are subject to change without notice. See Price List.

Address all correspondence to the firm and not to individuals. Outside distributors are operating as individual contractors and this company is not responsible for contracts made with them.
